2016

New Baldwin Residential School

Project

Multi Purpose Employees Portal - Work Project

The portal build & functionalities are as follows:

- *Built using **Core PHP, MySQL, Basic Java Script, CSS, HTML. Deployed inside a private linux server owned by client company**, the portal is exclusive for server allowed devices and networks.*
- ***Works as an Attendance portal**, where employees can mark their day-to-day attendance. **(Includes Leave Credits Mgt.)***
- ***Acts as a Help Desk** to store networking related issues, a common hub for all employees to get information on new issues raised by fellow colleagues.*
- ***Users can sign in as both Admin and Employee**, the Admin perspective includes options to add/remove employees/users, can grant/revoke the portal privileges*
- *The Admin perspective can also handle the client's bill related information. **Works as bill management system as well.***
- *The Admin perspective can also view the present/absent list and count of employees.*

Simple PC Assistant - College

It is a Python program that can be used by PC users to have some basic assistance on Windows platform through voice commands and users can use it as their personal assistant.
This application was built with Visual Studio Code IDE and Python.
